

# The Importance of Water

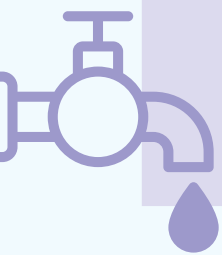

## Water Solutions

Water is one of our most valuable resources on the planet. With no water, there is no life.

Israel is a dry country, with desert like weather, droughts, and a small number of water sources. This is most likely the reason why Israel has become a leader in the field of water-technology.

For decades, Israeli companies have relentlessly developed innovative solutions to solve the local and global water crisis. The existential need for water in Israel provided a powerful incentive for inventors to come up with creative and brilliant ideas.

This Israeli technology is also used worldwide, helping to deal with the climate crisis, cities and people struck by natural disasters, and providing clean water for under developed communities.

## The Task

Read about the different difficulties Israel (and many other countries) are facing around the world with regards to water and about the wonderful solutions originating from Israel. Try and match correctly between each problem and its solution.
